-Getting Started

Welcome to **Brain Breaker**.

Brain Breaker is a game of logic. Try to unlock the secret color code sequence generated by the computer before your chances are up.

The object of **Brain Breaker** is to guess the sequence of four colored dots that the computer has selected at random from the colors shown on the left. Just start filling the row of holes with the yellow dot next to it, and each time you have completed a guess (i.e. filled all four holes) click the "guess" button on the top right and the computer will respond by displaying specific colored dots on the right of the entered row; one silver dot for each correct color and a gold dot if your guess was the right color and in the correct placing. You will not be informed about which colors were correct, which adds to the challenge. You choose a color by clicking on the desired color on the right hand side. If you haven't managed to guess the sequence by your eighth guess, the game will reveal the right sequence to you and the game ends. Press the "play again" button on game screen to try another code breaking escapade.

-Quit the Game

To quit **Brain Breaker**, press ⌘+Q (for mac), control+Q (for PC). You can also go to the file menu and select quit.

--Conclusion--

Now you are familiar with the basics of **Brain Breaker**. Crack the secret code before your chances are up. Red Rover Games thanks you for enjoying **Brain Breaker**. Keep up with updates and new releases from Red Rover Games at www.redrovergames.com.
